

Jira Test Case Report

Issue: SCRUM-6

Summary: VWO LLogin page requirement

Okay, here's a set of QA test case documents generated from the Jira ticket SCRUM-6, following your requested format and prioritizing conciseness while incorporating crucial elements. Each document will include ID, Title, Priority, Preconditions, Test Steps, Expected Result, and coverage gap identification.

Test Case 1

- ID: TC-001
- Title: Validate User Provided Email Address in Login Form
- Priority: High
- Type: Functional Testing
- Preconditions: New login is initiated with a valid email address.
- Test Data: Valid email address: test@example.com
- Steps: 1. Navigate to the Login Dashboard 2. Initiate the login process. 3. Observe Email Address field. 4. Submit the form.
- Expected Result: The email address field automatically validates with an alert box prompting the user for a valid email format. A successful password input will not be displayed to the user.
- Overall Expected Result: Authentication and input form correctness.
- Assumptions/Coverage Gaps: Requires Login Dashboard to be complete and functional.

Test Case 2

- ID: TC-002
- Title: Verify Successful Authentication with Valid Credentials
- Priority: Major
- Type: Functional / Regression
- Precondition: The test user inputs correct email and password.
- Test Data: Registered user email: test@example.com, registered password: password123
- Steps: 1. Attempt login. 2. Validate username & password. 3. Confirm successful Login 4. Verify success page is displayed.
- Expected Result: The User is successfully logged into the website with password stored.
- Overall Expected Result: Login functionality - proper validation.
- Assumptions/Coverage Gap: Need to determine what should happen if the user tries with incorrect credentials

Test Case 3

- ID: TC-003
- Title: Verify Password Reset Functionality – Send Email
- Priority: Major
- Type: Functional Testing
- Precondition: User identifies needs for password reset. The user has a saved password to use in the password reset functionality.
- Test Data:
- User: [User's Account Details]
- Email: test@example.com
- Password: "password123"
- Steps: 1. Navigate to resetpassword.page. 2. Submit a reset email. 3. Verify email appears containing reset instructions. 4. Validate the instructions link within the email.
- Expected Result: User receives an email with reset instructions. The email should include a link to a reset page with instructions that link to the account password.
- Overall Expected Result: Correct password reset process.
- Assumptions/Coverage Gap: Require the password reset page to be accessible to test users.

Test Case 4

- ID: TC-004
- Title: Login Failures During Peak Load (Simulate a Login Attempt)
- Priority: Medium
- Type: Functional / Performance
- Precondition: Service is being monitored under normal load. User is logged in. The user is attempting to login on the Login Dashboard
- Test Data: Email: "test@example.com", Password: "password123"
- Steps: 1. Initiate login process. 2. Monitor page load times. 3. Monitor for login failures.
- Expected Result: After the initial load, account not logged in. Login should show failure to avoid a full page load. User must be able to contact support.
- Overall Expected Result: Login performance test for the service
- Assumptions/Coverage Gap: Need to monitor performance to provide a robust level of monitoring.

Test Case 5

- ID: TC-005
- Title: Verify Successful SSO Integration with Google
- Priority: Minor
- Type: Functional / Integration
- Precondition: User is logging in via Google (with already valid credentials)
- Test Data: Google User Login - Credentials valid to test SSO
- Steps: 1. Verify successfully logging into VWO using Google authentication . 2. Verify Google login is handled as part of SSO protocol.
- Expected Result: After verification with Google login should automatically redirect back to the VWO dashboard. The user will then successfully log-in to the web application
- Overall Expected Result: Google SSO integration is working correctly.
- Assumptions/Coverage Gap: Verification testing is needed to assure login functionality is working.

Test Case 6

- ID: TC-006
- Title: Check for Dynamic Login Form Elements - Password Updates
- Priority: Medium
- Type: Functional / Usability
- Precondition: User is logged in
- Test Data: User has a login and password established, Password Updated.
- Steps: 1. Verify the update window and dynamic updates in the Password field. 2. Enter old password and verify changes to update it correctly.
- Expected Result: After successful login, the Password field is updated to reflect the new password.
- Overall Expected Result: Users will be guided in updating to their newly set password for ease of usage.
- Assumptions/Coverage Gap: User must login to test the functionality, but not actually enter a password.

Test Case 7

- ID: TC-007
- Title: Confirm User is redirected to Login Dashboard after successful authentication
- Priority: Medium
- Type: Functional / Usability
- Precondition: User successfully logged in.
- Test data: User is authenticated. Login success after proper validation.

- Steps: 1. Confirm User's redirection to login page.
- 2. Confirm User is redirected to the login page following successful login 3. Check the screen.
- Expected Result: The login page is redirected seamlessly from the successful login screen to a page with the login dashboard functionalities.
- Overall expected result: Verification that the URL redirection is working correctly.
- Assumptions/Coverage Gap: Verifying screen will not include any extra functionality.

Test Case 8

- ID: TC-008
- Title: User is redirected after log in - Verify the Dashboard is displayed.
- Priority: Minor
- Type: Functional / Usability
- Precondition Login successful, User redirected to the Login Dashboard.
- Test data User has successfully logged into the website/ application using a new Login form.
- Steps: 1. User is redirected to the login page after login completion. 2. User should see Login dashboard.
- 3. User check that the dashboard is displayed correctly
- Expected Result: User lands on the Login dashboard.
- Overall expected result: Validate the Dashboard load properly after the successful login process.
- Assumptions/Coverage Gap Verifying the layout of the Login dashboard

This list covers a solid range of test cases. Remember to assign priorities, roles and a detailed test strategy for effective execution. Let me know if you'd like more test case ideas or would like this set refined further (e.g., adding more specific edge-case scenarios!).
